'My own app'

If I were given a chance, I would want to make an

C. After thinking about it for a period of time, I have

.ome to the conclusion of what kind of app I would like

.ome to the conclusion of what kind of app I would like

o make.

I have decided to name my app as 'Let's share : Khushi Batau'. Well, as suggested by the name, the app's main motive is to provide help. About how the app will work, I have divided the app into 2 functions : Fundraising and Public Participation ~~The first function~~ Both the functions are very self-explanatory. The first function will allow users to provide financial aid to companies/NGO's/INGO's or even individual people. I have decided to allow even individual people to ask for aid through the help of

are very self explanatory. The first function will allow users to provide financial aid to companies / NGO's / INGO's or even individual people. I have decided to allow even individual people to ask for aid through the help of online forums which they will have to fill to provide evidence ⊕ that they are genuine. The second function is public participation which basically means that people who are unable or unwilling to pay may also be able to help the needy & ~~those~~ in their free time. This function will ask the users, whether they are free on a particular day and those who answer affirmative will be sent to one particular organization which is chosen and participate ~~in~~ in helping the people for the day. The target audience for this app ~~are people above~~ are people of all ages who have a kind and generous heart with the willingness to help people. To ~~make~~ promote my app, I would go to my school / college and make a speech infront of all students and plead them to share the info as well as

provide information about the app online.

    I know that making this app will not be easy and the success depends wholly upon the users, but I believe that it has a good chance of working as I think that most people are inherently good. I hope that one day I will be able to create such an app.
